

STANLEY Hosted Services

– the next level of security

STANLEY Hosted Services is a reliable and cost-effective service that takes care of your security system. Instead of installing servers and peripheral equipment locally, we handle this in our modern hosting environment.

As a user, you will not notice any difference – apart from not needing to keep track of backups, server operation, cooling, upgrades etc.

Depending on which level of service agreement you take out, you have the option of 24/7 support, with a very short response time.

As a user of STANLEY Hosted Services, you can focus entirely on your company's core business.

→ INCREASED SECURITY

STANLEY Security takes responsibility for the system, from the cradle to the grave.

With technical monitoring (System Service Assurance) of all components in the cloud, we know when something stops working or when it is time to replace or update – we have usually solved the problem before you have had the chance to discover it.

Increased redundancy by storing data at more than one physical location.

Increased reliability and stability over time with continuous updates.

→ PREVENTIVE RATHER THAN REACTIVE SECURITY

STANLEY Security upgrades the system at regular intervals so that it maintains its functionality and cyber security during the entire period of the contract.

→ COST EFFECTIVE

No surprises – you know exactly what it will cost you every month.

You need no longer invest in expensive hardware, you get what you need as a service, at a fixed price without any surprises.

STANLEY Security takes responsibility for operation and redundancy – you can focus on your core business.

Very easy to scale up or down when your needs change.

Using smart technology is more cost-effective than using people.

→ ENVIRONMENTALLY AND OPERATIONALLY SMART

No hardware on site, fewer resources used.

Having cloud servers is less energy-intensive.

No need to cool local server rooms for your security solution.

Applications

- ➔ ACCESS CONTROL SYSTEMS
- ➔ INTRUDER ALARMS
- ➔ INTERCOM TELEPHONY
- ➔ VIDEO SURVEILLANCE
- ➔ FIRE ALARMS
- ➔ PANIC ALARMS

STANLEY Hosted Services

Intelligent cloud solution for your company

The service is suitable for those who:

- ➔ Do not have a suitable local server environment or who need the kind of flexibility that is not possible with a traditional server environment.
- ➔ Have high requirements for operational security and cyber security.
- ➔ Only budget for running costs, not investments.

STANLEY Hosted Services can be integrated with all applications and enable customised integration – and can, of course, be adapted to your needs. Something that is rarely possible with more proprietary end-to-end solutions.

Do you have one site, or hundreds?

STANLEY Hosted Services is scaled according to your needs and handles both large and small sites. The system can provide storage for short or long periods of time as necessary, and can be easily adjusted in the event of a temporary or permanent change to your needs.

With access to the Internet, you can safely log on to our system wherever you find yourself.

We make it easy for you to comply with data protection legislation by connecting through a safe and encrypted connection, a so-called VPN tunnel, which ensures that unauthorised persons cannot gain access to your system.

All services that STANLEY Security provides for local installations can also be offered for STANLEY Hosted Services.

STANLEY Hosted Services

- ➔ Software, installation and configuration of the system.
- ➔ Safe and secure data communication and alarm transmission through an encrypted data tunnel.
- ➔ Cloud storage of data.
- ➔ Data backup.
- ➔ System monitoring – in the event of a component stopping working, an alarm is sent to the Security Centre.
- ➔ Proactive maintenance and service in accordance with the selected service level.
- ➔ Fixed monthly amount (Operating Expenditure) without the need for any investment.
- ➔ Cyber security vulnerability scanning at regular intervals.
- ➔ Redundant alarm reception and alarm handling.
- ➔ Continuously open alarm centre 24/7 – 365 days a year.
